The specified seat height dimensions are measured at the front edge of the seat upholstery. (The measurements are approximate. Due to the soft nature of the materials, measurements for upholstered furniture can never be exact.)

The seat height can vary due to the different elasticity properties of the cover fabric, different padding structures and due to utilization characteristics.

All technical specifications relevant to the furniture ranges are correct at the time of publication. Subsequent modifications are possible.

Colours may differ slightly for technical printing reasons. Please see the samples in store.
